

## Heating Pad for Fischer Processors

Here's an alternative to the heat exchangers used on Fischer brand x-ray film processors manufactured from about 1990 through 2007.

And if you ever changed a heat exchanger, you will be glad to consider an alternative.

This 110V, 180 watt peel & stick heating pad can be attached under the developer section power in a Fischer brand processor with plastic tanks, and the leads connected to the heat exchanger.

The water solenoid should be disconnected from the heat exchanger and connected directly to the wash section.

This heating pad is safe for use on plastic tanks, even if the fluid drains and the tank is empty. Less than 25% the cost of a heat exchanger! Dealers can contact FI Sales to purchase these Heating Pads.
